## **Light+Building 2008:**

### **The Tenuis range of products from LITE-LICHT: new elegance for offices**

High-quality lighting technology combining eminent design and an extremely slimline construction.

**Herzebrock-Clarholz, 18 March 2008 – At this year's Light+Building LITE-LICHT GmbH, supplier of innovative and energy efficient lighting systems presents (Hall 3.0, Stand D 20) its new product range, Tenuis, which combines elegant design with an extremely slimline construction and at the same time meets all the requirements of modern office lighting. Whilst Tenuis is one of the most slimline pendant light fittings available, by incorporating optional sensors it also becomes an energy efficient lighting concept. The availability of Tenuis gives architects and lighting planners the possibility to define new lighting benchmarks for office spaces. The new product range is exclusively the result of LITE-LICHT's in-house design and development.**

Tenuis is a new product range developed by LITE-LICHT consisting of pendant and surface-mounted lights fittings, wall and floor lights. High-quality lighting technology and an extremely slimline construction are the key features of this new range of light fittings which blend in unobtrusively into any surroundings. The slimline body of the pendant and surface-mounting light fittings has a visible height of only 24 mm and makes a design statement in any office interior. At the same time Tenuis is currently one of the most slimline pendant light fittings on the market. This minimal construction height is made possible by small-darklight parabolic specular louvre technology and micro-prisms. Tenuis is suitable for single and strip light installation with an optically continuous louvre and is available in different RAL colours. Tenuis enables architects and lighting planners to create modern and holistic designs and to configure the lighting so that it harmonises with well-being of the office user.

#### **Elegance and functionality**

All versions of the new range of products meet the requirements for computer screen workstations according to the current standards enabling planners to use Tenuis as a universal option for the total design of office areas and rooms. In addition to direct and indirect light distribution LITE-LICHT also offers the option of using daylight and movement sensors to achieve an energy efficient lighting design. Not only does optimally controlled lighting save energy costs, it is also of greater benefit to the user's well-being.

### **Tenuis – more than a name**

“The name Tenuis comes from the Latin 'tenuis', which in English means both small and delicate as well as simple. The product name 'Tenuis' therefore reflects the central feature of the LITE-LICHT light fitting: very slimline construction, rectilinear form as well as being minimalist,” is how Dr. Marcus Liehr, managing director for marketing and sales for LITE-LICHT GmbH, explains the name given to the light fitting.

### **About LITE-LICHT**

LITE-LICHT offers building owners, general contractors, architects, engineering consultants as well as electrical wholesalers complete lighting systems which in their function and form are perfectly adapted to the respective requirements. They are used in commercial and public premises as well as representative areas: office and training rooms, educational establishments, exhibitions, production halls and warehouses as well as hotels and car parks. In addition to a large selection of louvered light fittings the product range includes reflector lamps, recessed downlights, illuminated ceilings, floor lamps and quick assembly strip light systems. LITE-LICHT products are used by such companies as Kulmbacher Brauerei AG, Miele & Cie. KG, Schüco Int. KG and the Marriott Hotel in Cologne.

### **Brief portrait of LITE-LICHT GmbH**

LITE-LICHT GmbH is a family-owned company founded in 1948 and based in Herzebrock-Clarholz in East Westphalia. Following the motto 'ENJOY LIGHT' the company develops and sells innovative and energy efficient lighting systems. Through its three business units 'LITE-LICHT', 'StarLicht' and 'itec' LITE-LICHT GmbH provides individual lighting solutions for sophisticated and design-orientated applications in the industrial, representative and private sector. The overriding aim of product development is to use lighting to improve people's everyday life and workplace experience. As a consequence all light fittings are designed in such a way that they meet both aesthetic and functional requirements as well as promoting people's well-being and health. Around 400 employees at the locations Herzebrock-Clarholz, Bartensleben and in different overseas companies draw on the latest environmentally friendly manufacturing processes to produce innovative lighting

solutions to the same consistently high quality standard. You can find more information at [www.enjoy-light.de](http://www.enjoy-light.de).
